

6.1040: *Software Design*

Arvind Satyanarayan & Max Goldman

(with slides from Daniel Jackson)

A woman is sitting on a floral patterned sofa in a room with red and gold patterned wallpaper. A large, ornate chandelier hangs from the ceiling. The room is decorated with framed portraits and a small table with a teapot. The text "What does ChatGPT mean for the future of programming?" is overlaid in white on a dark blue background.

What does ChatGPT mean for the future of programming?

Sharif Shameem ✓

@sharifshameem

I just built a *functioning* React app by describing what I wanted to GPT-3.

I'm still in awe.

Google Drive Sucks

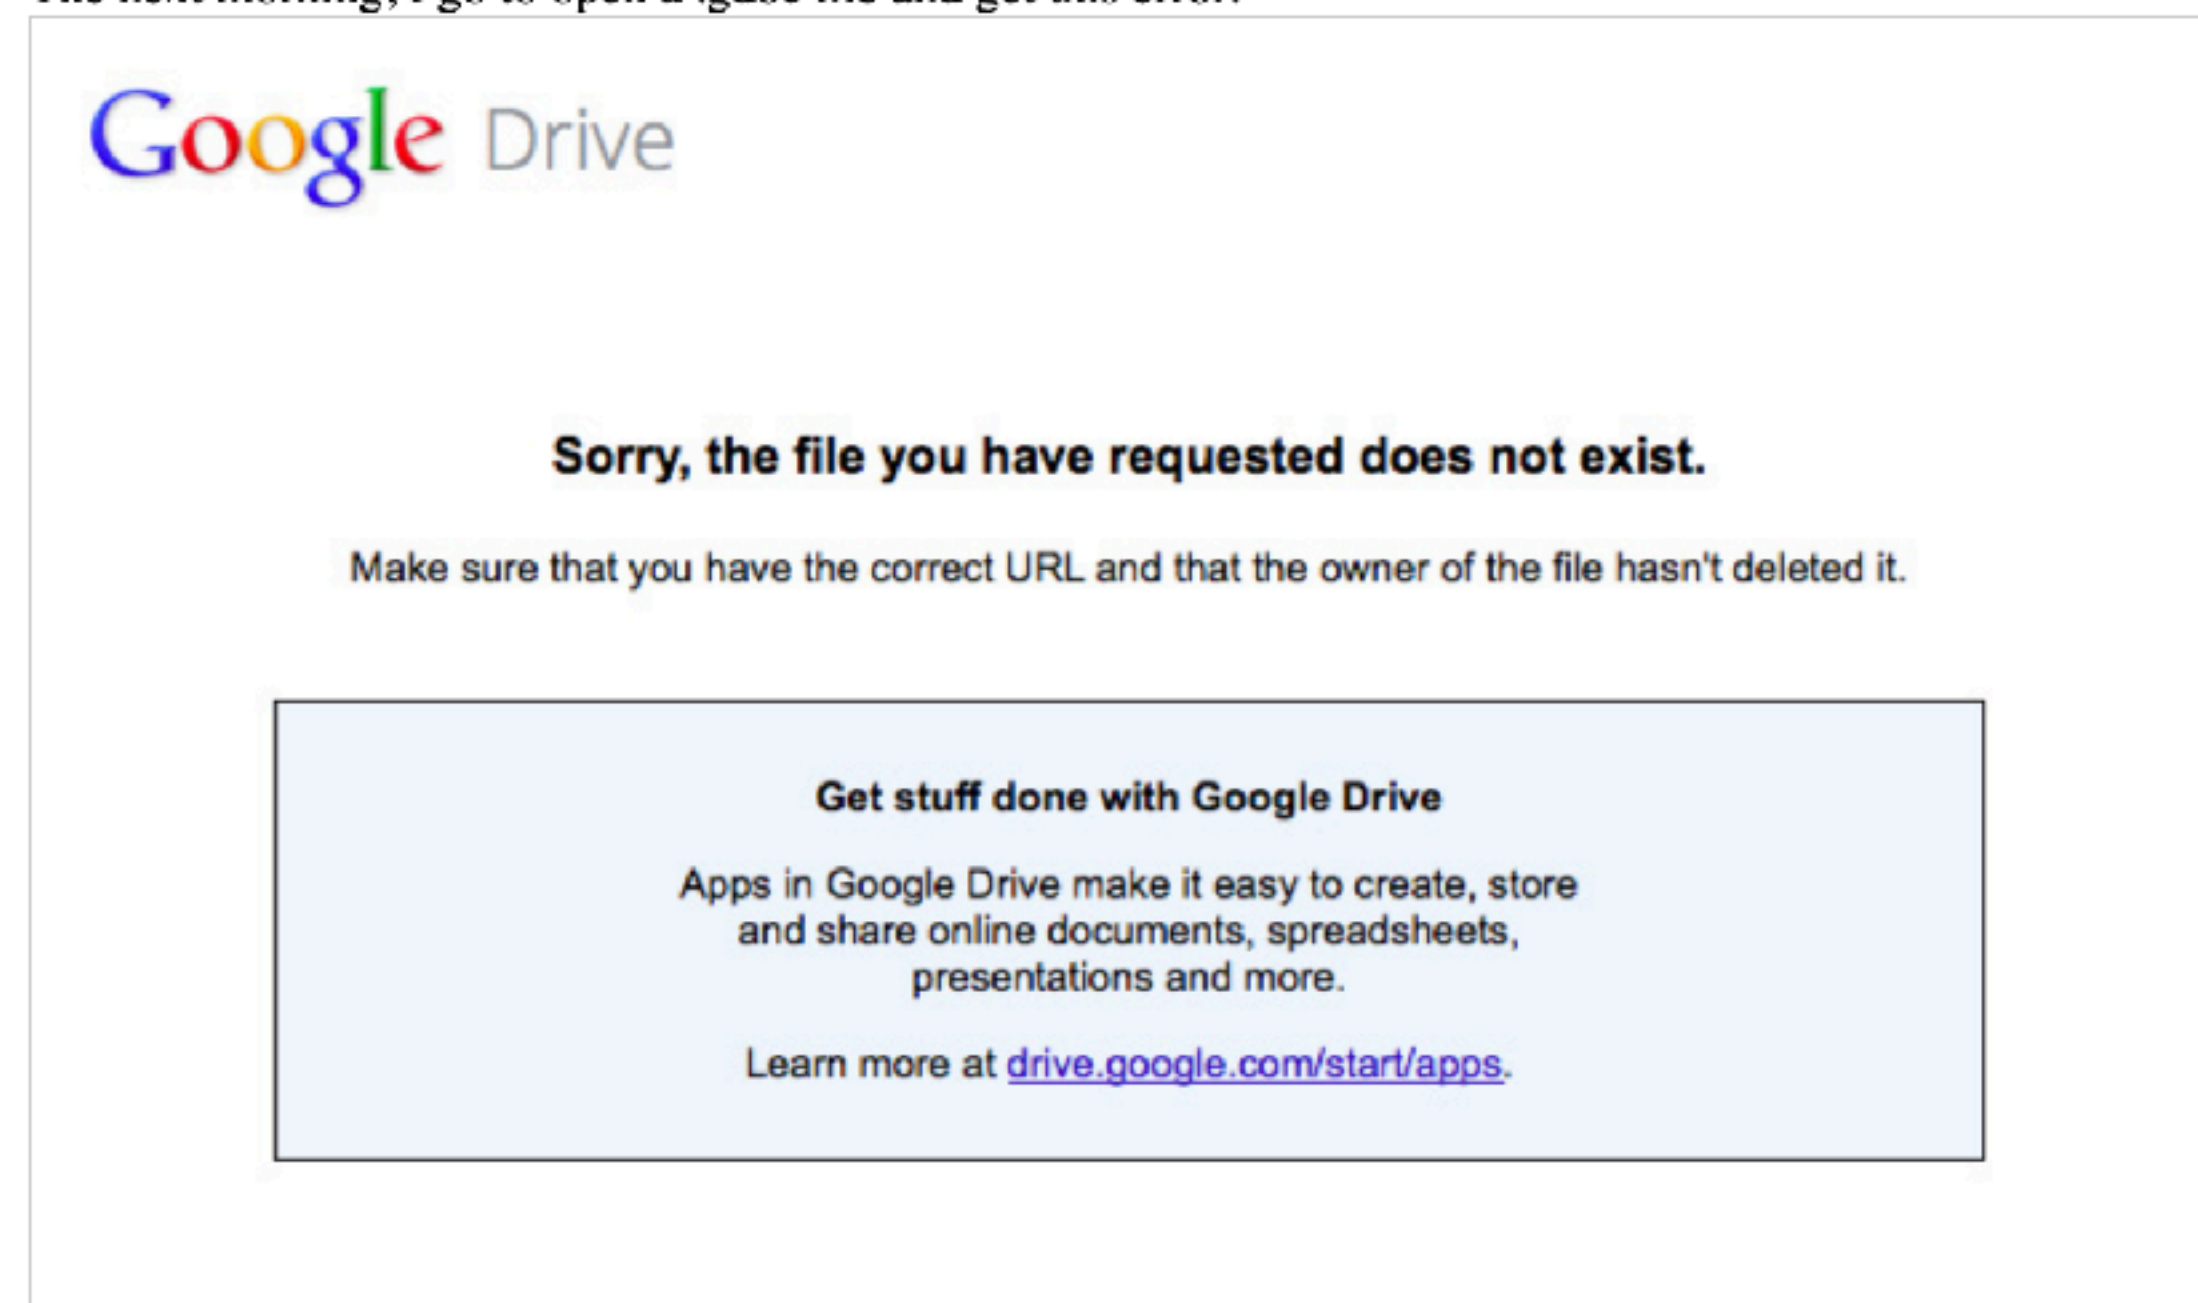

Google Drive storage loses Google Docs data

I lost years of work and personal memories that I saved as Google Docs files because of a poor user interface.

What happened

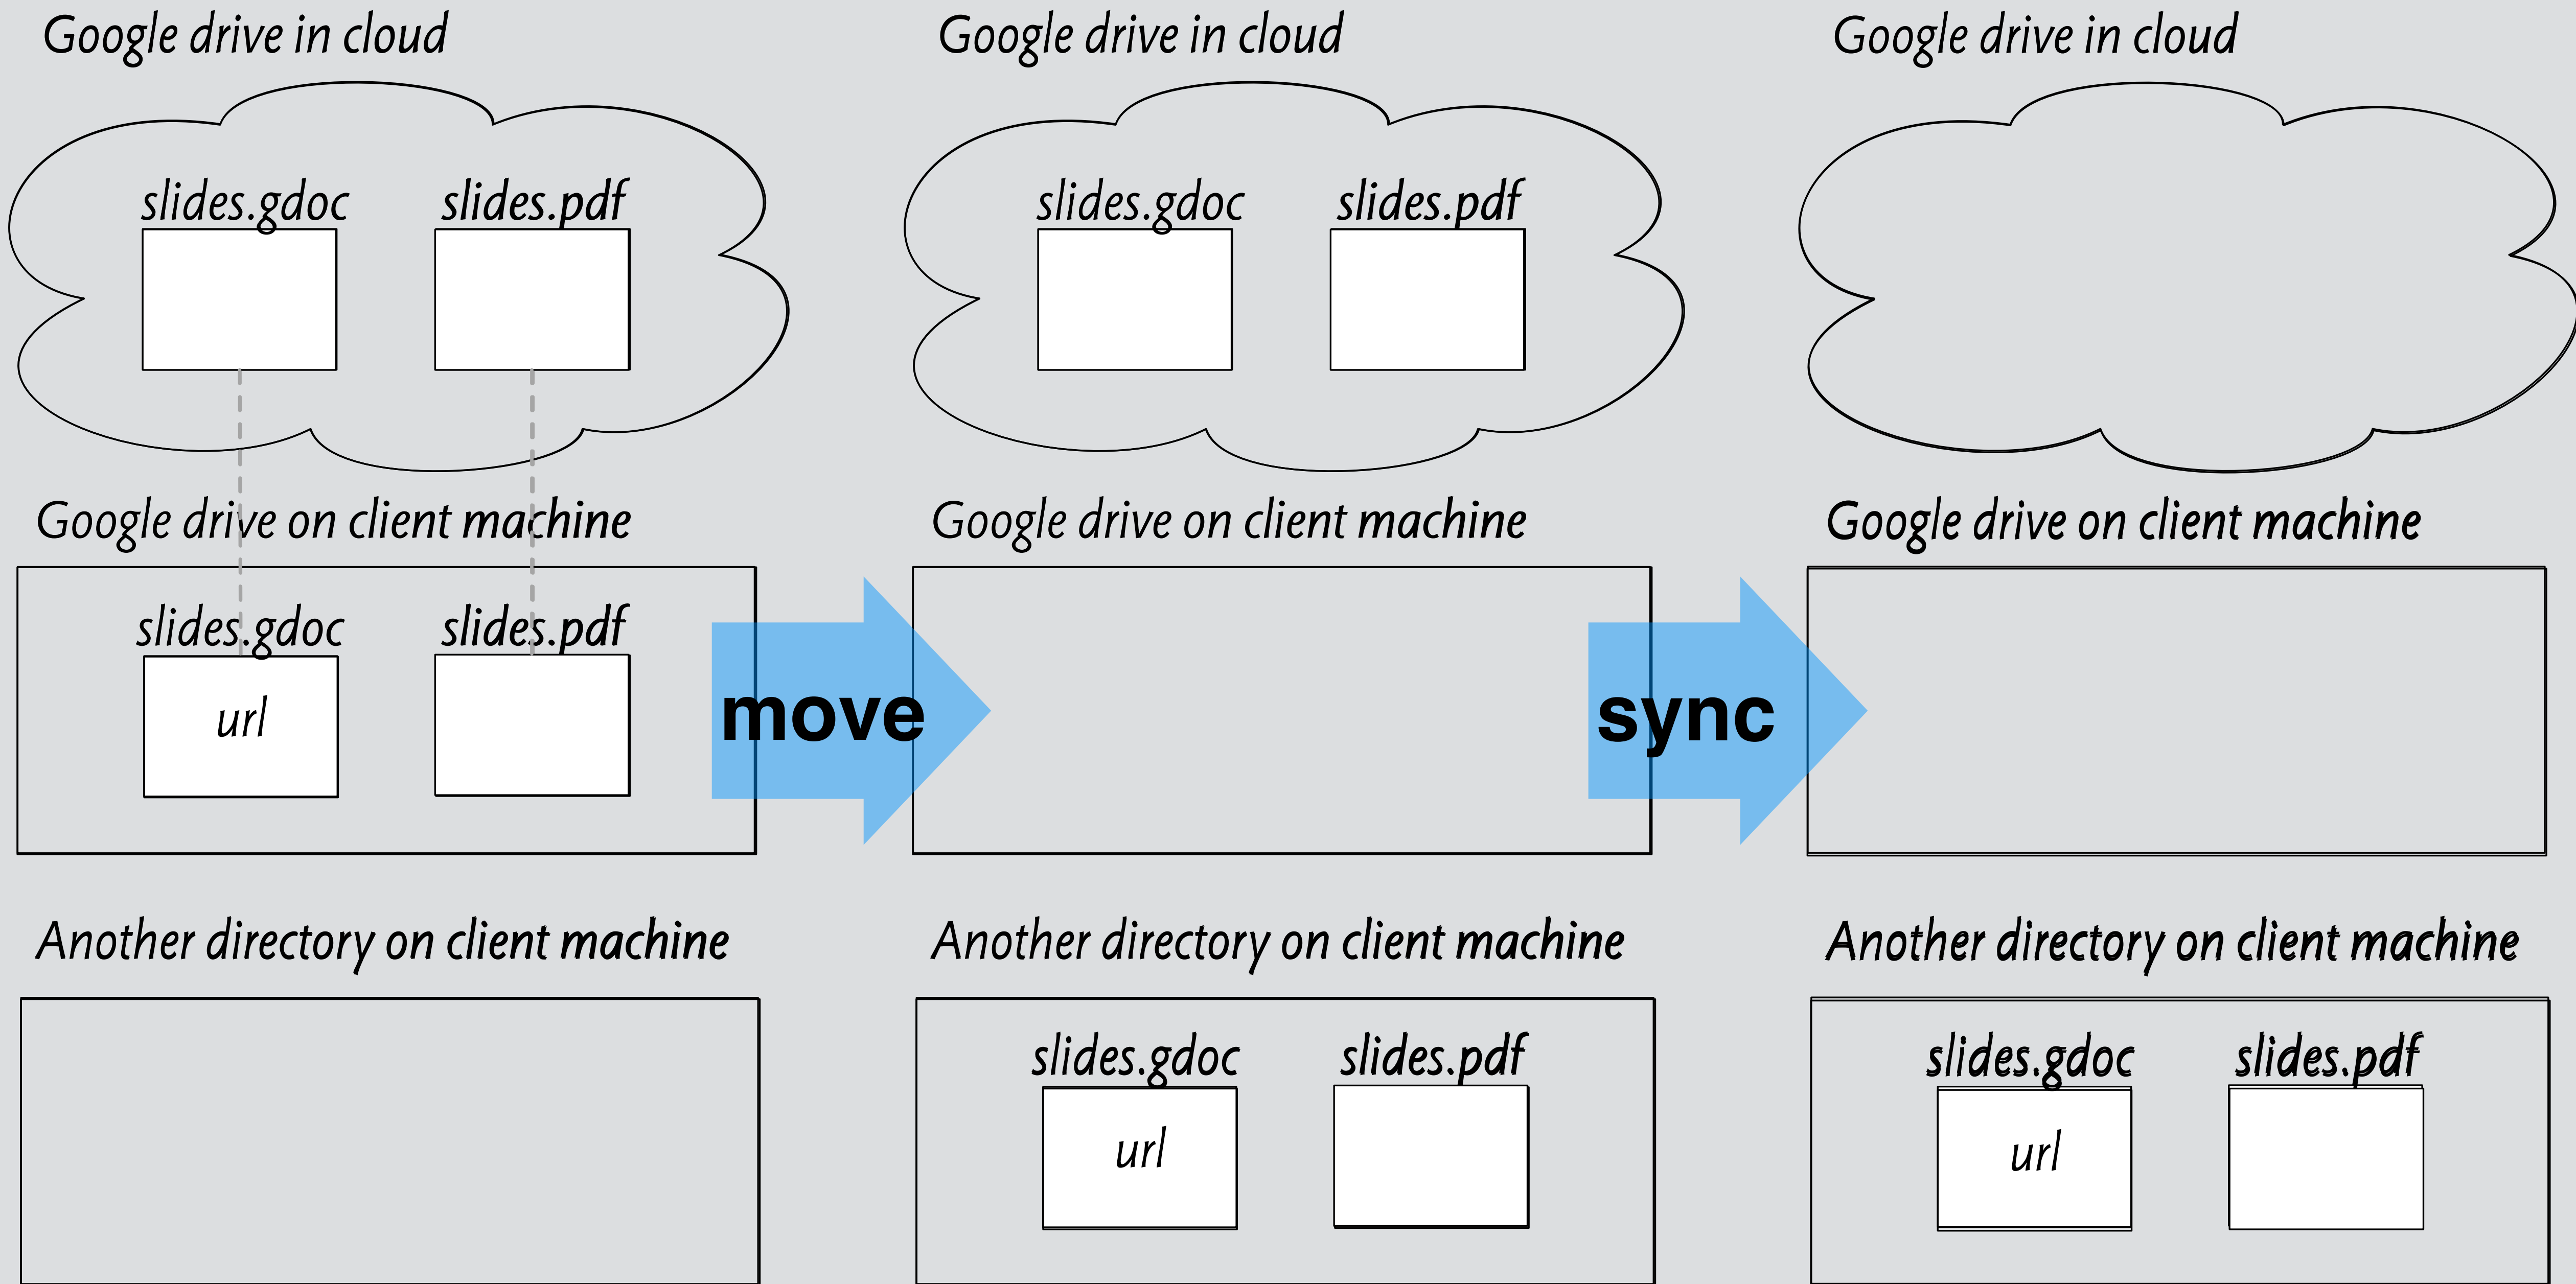

I was organizing my files on my local computer. I moved them around and out of my Google Drive folder which syncs files. I didn't think anything of it. In the process I got an email from Google saying I'm running out of storage. So I go to the Google Drive site and empty the trash. I didn't think anything of it. I finish organizing my files.

The next morning, I go to open a .gdoc file and get this error:

My heart sank. What happened to the work from yesterday? I opened another file. Then another. All of them the same message. I was starting to freak out.

sync concept doesn't behave according to conventional design

Class Contributions (10%)

Constructive ways that benefit your classmates (e.g., blog posts, critiques, forum Q&A, etc.)

Team Project (25%)

Identify a problem, design and implement an app to address it.

Preps (5%)

Short weekly exercises to help you prepare for recitation or lecture.

Graded as *check-offs*.

Individual Assignments (60%)

Design and implement your own (small, scoped) social media app

What do you look for?

Look for *workarounds* and *hacks*

"Errors" are goldmines

Pay attention to *artifacts*

Analyzing Interview Results

Goals

You can explain **why** people do **unusual things**.

Develop your **point of view** as a designer.

Define the **scope** of your project

Process

Look for **surprises, tensions**, and **contradictions** in what people said.

Reflect on the implications for your project.

Summary

Need finding helps us ground our design in **real (not imagined) user needs**.

Observation is a good way to **uncover the "what"**: workarounds, hacks, errors that suggest an opportunity for a design intervention.

Interviews help us **connect through to the "why"**: people make sense to themselves, and it's our job to understand how to square the contradictions/tensions.

Key to interview success: **build rapport** + be willing to **veer off script** and follow-up surprising/unexpected threads.
